

Inspicio in Calabar

Inspicio company, Inspectorate opens in Calabar.

Situated in Nigeria's Cross River State close to the border with Cameroon, Calabar is an important port for the distribution of automotive and household fuels throughout eastern Nigeria. Inspicio and Insoectorate have established the laboratory to meet the analytical needs of its clients in this important region.

The new facility is equipped to perform tests on gasoline, gas oil and kerosene (DPK) in accordance with IP and ASTM methods. These tests include water by distillation; sulphur, flash point, density, colour, kinematic viscosity and atmospheric distillation.

The establishment of this new laboratory complements Inspicio's existing facilities in Lagos and Port Harcourt and will allow the company to offer a more complete service to both local and international clients in Nigeria.
